

Jenny Questions:

**Subject:** Tsunami Public Evacuation Maps - Tsunami Zone Information Improvements

**Email Distributed to:** City, Tribal, County, Fire, EM Reps, County Roads

Good morning everyone, 4 points in this email:

1. Do you need more tsunami evacuation maps? How many do you have left?
  1. Toledo, Seal Rock, Waldport and Yachats are either out of maps or will be out very soon
2. Would you be interested in a group cost proposal to reprint needed maps? The county would coordinate the re printing but would have to submit a recommendation to the BOC or next FY19-20 budget for our cost share portion. I've received a quote from OSU Digital Printing - we can receive government pricing to use OSU Printing Services, estimate is about \$1,600 per 500 maps
3. Reminder there is grant funds for additional signage funding opportunities through the state - email sent last couple of weeks
4. Let you know of some recent improvements in public outreach/signage

#### **4. Tsunami Signs and Outreach Updates:**

4A) "You are here" - beach access evacuation signs have been added:

- To all State Park areas and coastal highway public beach access areas
- County parks in the inundation areas will be installed in the next month - they are headed to the printers soon
- Cities - Were all offered funding to assist with additional signs if needed. There is more funds available if they need more signs in your district area. Let me know.

4B) DOGAMI:

- They made a change in the "on-line address viewer" so it shows both the distant/local zones on the tsunami map website. This is a great way for folks to look up where they are at to see if they are in the zone.
- Has or is in the process of making the on-line maps more user friendly so they can be printed from home computers, i.e., you can select a smaller area - your personal evacuation area and print just that piece vs. the entire large map. This was not available before
- Working on new "beat the wave" time estimates for the most vulnerable populated areas along the coast.

4C) ODOT - finished installing new or relocating the Hwy 101 tsunami in/out of the zones to the correct areas.

4D) County Roadway Signs - many cities have started a blue line road sign on the street pavement. County Road Department, Roy Kinion and I will be evaluating all County roads in the inundation area over the winter and will make a recommendation to implement roadway signage next spring.

5) Additional signage ideas: I have wondered if it might be beneficial to have external metal signs made with the tsunami maps and have them placed at prominent locations in coastal areas, such as city halls, libraries, or other places where people frequent. We might be able to ask if the current signage funding could be used for this purpose. It's just another way to educate the public vs. printing hard copy maps.

## **2) Map Print Cost Estimate**

### **Lincoln County Maps - based on the largest size map**

Artwork: Furnished

Layout: 2-sided, with bleed

Stock: ***80lb Pacesetter Silk Book***

Ink: 4/4

Bindery: Trim, Score, Fold

Finished Size: 18" x 30" (flat), 4" x 9" (folded)

**Qty: 500 = \$1,590**

**Qty: 600 = \$1,619**

**Qty: 700 = \$1,644**

### **Lincoln County Maps**

Artwork: Furnished

Layout: 2-sided, with bleed

Stock: ***80lb Cougar Opaque Book***

Ink: 4/4

Bindery: Trim, Score, Fold

Finished Size: 18" x 30" (flat), 4" x 9" (folded)

**Qty: 500 = \$1,688**

**Qty: 600 = \$1,725**

**Qty: 700 = \$1,759**
